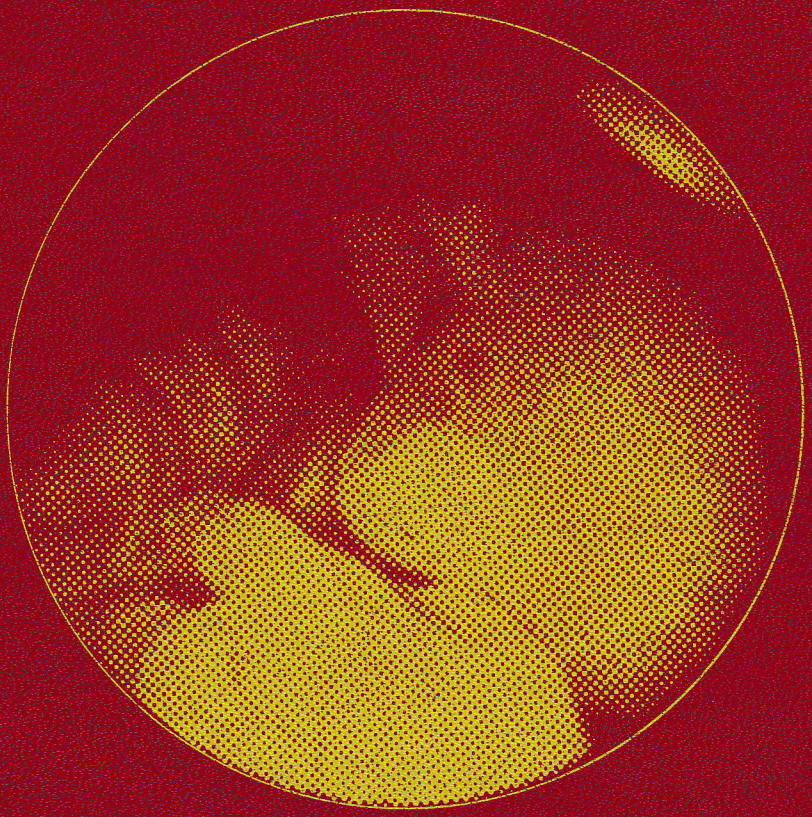
Hans Galjaard

GENETIC METABOLIC DISEASES

Early diagnosis and prenatal analysis



Elsevier/North-Holland

Contents

Preface *ix*

Acknowledgements *xi*

Chapter I – Congenital Disease and (Infant) Mortality and Morbidity *1*

1. General introduction 3

2. Incidences and recurrence risks for various categories of congenital disorders 5

2.1. Introduction 5
2.2. Diseases due to single gene mutations 6
2.3. Chromosomal aberrations 9
2.4. Congenital malformations due to abnormal embryological development 12

3. Early diagnosis and prevention 15

3.1. Introduction 15
3.2. Analysis of metabolites 16
3.3. Demonstration of the responsible protein defect 18
3.4. Investigation of the gene mutation 21
3.5. Prenatal diagnosis and prevention 23

References 30

Chapter II – Diagnosis of Genetic Metabolic Diseases *39*

1. General introduction to early diagnosis of genetic metabolic diseases 41

References 55

2. Inborn errors of carbohydrate metabolism 58

2.1. Introduction to differential diagnosis 58
2.2. Glycogenosis type II (Pompe's disease) 64
2.3. Glycogenosis type III (Cori's disease) 68
2.4. Glycogenosis type IV (amylopectinosis; Andersen's disease) 70

2.5. Transferase deficiency galactosemia 72
References 75

3. Mucopolysaccharidoses 82
3.1. Introduction to differential diagnosis 82
3.2. Mucopolysaccharidosis IH (Hurler's disease) 93
3.3. Mucopolysaccharidosis II (Hunter's disease) 101
3.4. Mucopolysaccharidosis III (Sanfilippo's syndrome) 105
3.5. Mucopolysaccharidosis IV (Morquio's syndrome) 109
3.6. Mucopolysaccharidosis IS (former type V of Scheie's syndrome) 112
3.7. Mucopolysaccharidosis VI (Maroteaux–Lamy syndrome) 115
3.8. Mucopolysaccharidosis VII 118
References 121

4. Diagnosis of mucolipidoses 132
4.1. Introduction to differential diagnosis 132
4.2. Mucolipidosis I (Sialidosis I) 135
4.3. Mucolipidosis II (I-cell disease) 137
4.4. Mucolipidosis III (pseudo-Hurler polydystrophy) 144
4.5. Mucolipidosis IV 146
4.6. α-Mannosidosis 147
4.7. Fucosidosis 151
References 158

5. Inborn errors in lipid metabolism 166
5.1. Introduction to differential diagnosis 166
References 174
5.2. Farber's lipogranulomatosis 178
References 181
5.3. Sphingomyelin lipidosis (Niemann–Pick disease) 183
References 191
5.4. Glucosylceramide lipidosis (Gaucher's disease) 195
References 202
5.5. Galactosylceramide lipidosis (globoid cell leukodystrophy or Krabbe's disease) 206
References 211
5.6. Sulfatide lipidosis or metachromatic leukodystrophy 215
5.7. Multiple sulfatase deficiency (mucosulfatidosis) 226
References 229
5.8. Ceramide trihexoside lipidosis (Anderson–Fabry disease) 237
References 246
5.9. G_{M1}-gangliosidosis 252
References 261
5.10. G_{M2}-gangliosidosis (Tay–Sachs disease and Sandhoff's disease) 266
References 281
5.11. Wolman's disease 290
References 294
5.12 Refsum's disease 297
References 300

6. Inborn errors of amino acid metabolism 303
6.1. Introduction to differential diagnosis 303
References 311
6.2. Inherited disorders in the metabolism of the urea cycle 315
6.3. Citrullinemia (argininosuccinate synthetase deficiency) 317
6.4. Argininosuccinic aciduria (argininosuccinate lyase deficiency) 320
6.5. Hyperargininemia (arginase deficiency) 323
References 325
6.6. Inherited disorders in the metabolism of branched-chain amino cells 330
6.7. Hypervalinemia and hyperleucine-isoleucinemia 333
6.8. Maple syrup urine disease 334
6.9. Isovaleric acidemia ("sweaty foot" syndrome) 340
6.10. β-Methylcrotonylglycinuria 343
6.11. α-Methylacetoacetyl-CoA β-ketothiolase (β-ketothiolase) deficiency 345
6.12. Propionic acidemia 347
6.13. Methylmalonic acidemia 351
References 355
6.14. Inherited disorders of sulfur amino acid metabolism 363
6.15. Homocystinuria 366
6.16. Cystathioninuria 379
6.17. Cystinosis 382
References 389
6.18. Defects in (hydroxy)lysine metabolism 401
6.19. Other inherited disorders of amino acid metabolism 407
References 411

7. Inborn errors in nucleic acid metabolism 415
7.1. Introduction to differential diagnosis 415
7.2. Lesch–Nyhan syndrome 422
7.3. Adenosine deaminase deficient combined immunodeficiency 436
7.4. Defective T-cell immunity (nucleoside phosphorylase deficiency) 444
7.5. Hereditary orotic aciduria 446
7.6. Xeroderma pigmentosum 448
7.7. Ataxia telangiectasia 457
References 459

8. Other genetic metabolic diseases 476
8.1. Introduction 476
8.2. Menkes' disease 477
8.3. Aspartylglucosaminuria 486
8.4. Familial hypercholesterolemia 491
References 497

Chapter III – Methodology of Prenatal Analysis in Early Pregnancy 505

1. General introduction 507

2. Amiocentesis in early pregnancy 512

3. Induction of second-trimester abortion 526

4. Composition and analysis of amniotic fluid supernatant 531

5. Alphafetoprotein assays and prenatal detection of open neural tube defects 535

6. Cultivation of amniotic fluid cells and fetal chromosome analysis 541

6.1. Introduction 541
6.2. Amniotic fluid cell cultivation 542
6.3. Different amniotic fluid cell types 546
6.4. Fetal chromosome preparation 548
6.5. Fetal sex determination 552

7. (Micro)biochemical analysis of cultured cells 554

7.1. General aspects 554
7.2. Preparation of the cell sample and incubation procedure 556
7.3. Microspectrophotometry and microfluorometry 568
7.4. Radiometric (micro)analysis 579
7.5. Electrophoresis, chromatography and other methods of prenatal analysis 586
7.6. Relation between cell cultivation conditions and biochemical properties 590

References 597

Chapter IV – Practical Experience with Prenatal Diagnosis of Genetic Metabolic Diseases *621*

1. General introduction 623

2. Prenatal diagnosis of inborn errors in carbohydrate metabolism 630

3. Prenatal diagnosis of mucopolysaccharidoses and mucolipidoses 634

4. Prenatal diagnosis of lipidoses 641

4.1. Farber's disease 641
4.2. Niemann–Pick disease 642
4.3. Gaucher's disease 644
4.4. Krabbe's disease 645
4.5. Metachromatic leukodystrophy 646
4.6. Fabry's disease 649
4.7. G_{M1}-gangliosidosis 650
4.8. G_{M2}-gangliosidosis type I (Tay–Sachs disease) 652
4.9. Sandhoff's disease 655
4.10. Wolman's disease 655

5. Prenatal diagnosis of inherited aminoacidopathies 657

5.1. Citrullinemia 658
5.2. Argininosuccinic aciduria 658
5.3. Maple syrup urine disease 660
5.4. Propionic acidemia 661

5.5. Methylmalonic acidemia 662
5.6. Cystathioninuria 664
5.7. Homocystinuria 664
5.8. Cystinosis 665

6. Prenatal diagnosis of inherited disorders in nucleic acid metabolism and some other genetic defects 669
6.1. Introduction 669
6.2. Lesch–Nyhan syndrome 670
6.3. Xeroderma pigmentosum 673
6.4. Combined immune deficiency due to adenosine deaminase deficiency 676
6.5. Menkes' disease 678
6.6. Hypercholesterolemia 680
6.7. Lysosomal acid phosphatase deficiency 682
6.8. Hypophosphatasia 682

References 684

Chapter V – Prevention of Sex-Linked Disease *701*

1. General aspects 703

2. X-linked metabolic disorders detectable by amniotic fluid cell analysis 710
2.1. Mucopolysaccharidosis II (Hunter's disease) 710
2.2. Ceramide trihexosidosis (Fabry's disease) 712
2.3. Lesch–Nyhan syndrome 713
2.4. Menkes' disease 715

3. Prevention by early diagnosis, genetic counseling and prenatal sex determination 717
3.1. Duchenne's progressive muscular dystrophy 719
3.2. Hemophilia 726

References 733

Chapter VI – Some Aspects of Future Development *743*

1. Diagnosis and pathogenesis 745

2. Clinical treatment and basic research 751

3. Prevention and prenatal monitoring 759

References 778

Appendices *789*

App. 1–10 – General methodology 791

App. 11–14 – Carbohydrate metabolism 809

App. 15–23 – Mucopolysaccharidoses 812

App. 24–40 – Mucolipidoses/lipidoses 817

App. 41–63 – Aminoacidopathies 830

App. 64–70 – Nucleic acid metabolism 847

App. 71–75 – Other genetic defects 853

Subject index *859*
