

DEVELOPMENTAL GENETICS

CLEMENT L. MARKERT
HEINRICH URSPRUNG

Foundations of **DEVELOPMENTAL BIOLOGY** Series

DEVELOPMENTAL GENETICS

CLEMENT L. MARKERT

is Professor and Chairman of the Department of Biology at Yale University. He received his Ph.D. at Johns Hopkins University.

HEINRICH URSPRUNG

is Professor, Eidgenössische Technische Hochschule Zoologisches Institut, Zurich. He received his Ph.D. at the University of Zurich.

PRENTICE-HALL FOUNDATIONS OF DEVELOPMENTAL BIOLOGY SERIES

Clement L. Markert, Editor

VOLUMES PUBLISHED OR IN PREPARATION:

FERTILIZATION

C. R. Austin

CONTROL MECHANISMS IN PLANT DEVELOPMENT

Arthur W. Galston and Peter J. Davies

PRINCIPLES OF MAMMALIAN AGING

Robert R. Kohn

EMBRYONIC DIFFERENTIATION

H. E. Lehman

DEVELOPMENTAL GENETICS*

Clement L. Markert and Heinrich Ursprung

CELL REPRODUCTION DURING DEVELOPMENT

David M. Prescott

PATTERNS IN PLANT DEVELOPMENT

T. A. Steeves and I. M. Sussex

CELLS INTO ORGANS: The Forces That Shape the Embryo

J. P. Trinkaus

*Published jointly in Prentice-Hall's Foundations of Modern Genetics Series

PRENTICE-HALL, INC.,
Englewood Cliffs, New Jersey

0-13-208348-5

Contents

Preface ix

ONE • DIFFERENTIAL GENE FUNCTION: THE BASIS OF CELL DIFFERENTIATION	1
TWO • DIFFERENTIAL GENE FUNCTION: RNA SYNTHESIS	7
The anucleolate mutant of <i>Xenopus laevis</i> : genetic lesion and developmental consequences	8
The biochemical lesion	8
The genes for ribosomal RNA	11
Differential synthesis of rRNA during development	13
Control of ribosomal RNA synthesis	16
<i>Gene amplification</i>	17
<i>Different rates of transcription</i>	19
Other types of RNA transcribed during amphibian development	19
Tissue specificity of transcription	21
THREE • DIFFERENTIAL GENE FUNCTION: PROTEIN SYNTHESIS	26
Protein synthesis during early embryonic development of the sea urchin	27
Fluctuation in synthesis: reality or artifact?	27
Controlling elements	31
<i>Differential transcription</i>	31
FOUR • DIFFERENTIAL GENE FUNCTION: ENZYME SYNTHESIS AND DEGRADATION	36
Lactate dehydrogenase	37
Xanthine dehydrogenase in chick liver development	49
Aldehyde oxidase in <i>Drosophila</i>	51
Hormone-induced enzyme synthesis in plants— the density labeling technique	53

FIVE • REGULATION OF GENE FUNCTION	55
DNA content of vertebrate cells	55
The operon concept in higher organisms	64
<i>Are there examples, in higher organisms, for clustering of structural genes of biochemical pathways?</i>	66
<i>Is there evidence for an operator in such gene clusters?</i>	67
<i>Is there evidence for regulator genes?</i>	68
<i>Is there evidence for a repressor substance?</i>	70
Position-effect variegation	71
The Lyon hypothesis	77
Heterochromatin	81
Hormones and gene action	83
Chromosomal macromolecules	90
SIX • CHROMOSOMAL DIFFERENTIATION	96
The chemical composition of chromosomes	97
Stability of differentiated state of chromosomes	98
The ultrastructure of chromosomes	108
SEVEN • TRANSLATIONAL AND EPIGENETIC CONTROL MECHANISMS	111
The longevity of messenger RNA	111
<i>Erythroid development</i>	112
<i>Lens differentiation</i>	113
Mechanisms of mRNA stabilization	116
Epigenetic modification of proteins	119
EIGHT • NUCLEOCYTOPLASMIC INTERACTIONS	123
The driving force of cell differentiation	123
Molecular exchanges between nucleus and cytoplasm	126
Control of macromolecular synthesis in the nucleus by cytoplasm	128
Hybridization	132
Nuclear transplantation	133
Nuclear transplantation between species	135
Hybridization of cells in vitro	137
Meiosis and mitosis	139
Maternal effects	142

NINE • GENETIC INTERACTIONS IN CELL DIFFERENTIATION	147
Melanocyte differentiation	147
Allophenic mice	158
TEN • GENES AND MORPHOGENESIS	162
Pleiotropism	162
Phenocopy	165
Embryonic induction and morphogenesis	169
Imaginal discs	171
The bithorax series	175
Transdetermination	179
Regeneration and the programming of gene function	184
Amphibian limb regeneration	184
Amphibian lens regeneration	185
Mammalian liver regeneration	185
The lability of the differentiated state in Hydra	188
Lethal cell differentiation	189
ELEVEN • ABNORMAL DEVELOPMENT AND CANCER	194
Neoplasia	194
<i>Levels of misregulation</i>	194
<i>Misregulation at more than one level; and the degree of misprogramming</i>	196
Teratomas	197
Carcinogenic agents	198
<i>Genes and cancer</i>	198
<i>Physiological stress</i>	199
<i>Carcinogens</i>	199
<i>Oncogenic viruses</i>	200
Neoplasia as a disease of cell membranes	200
TWELVE • OMNIS EMBRYO E DNA?	203
The genetic control of order and shape	208
Molecular self-assembly	210
INDEX	213
