Chapter 1. Protein Synthesis in Mammalian Systems
by VIRGINIA M. PAIN and M.J. CLEMENS

Introduction	1
1. Components of the protein synthetic machinery	2
1.1. Ribosomes	2
1.1.1. General features	3
1.1.2. Phosphorylation of ribosomal proteins	4
1.1.3. Proteins associated with the ribosome	5
1.1.4. Formation and degradation of ribosomes	7
1.2. Messenger RNA	7
1.2.1. Structure of messenger RNA	7
1.2.1.1. General features	14
1.2.1.2. Messenger ribonucleoprotein	15
1.2.2. The biosynthesis of mRNA	17
1.3. Transfer RNA	17
1.3.1. tRNA and initiation	18
1.3.2. tRNA and polypeptide elongation	19
1.3.3. Biosynthesis of tRNA	20
2. The mechanism of protein biosynthesis	21
2.1. Initiation of protein synthesis	21
2.1.1. Mechanism of initiation	23
2.1.2. Individual reactions of initiation	23
2.1.2.1. Formation of the (40S.Met-tRNA _f .GTP) complex	24
2.1.2.2. Binding of (40S.Met-tRNA _f .GTP) to mRNA	26
2.1.3. Gaps in present knowledge	28

2.2. Polypeptide chain elongation	29
2.2.1. Amino acid activation	29
2.2.2. Aminoacyl-tRNA binding to ribosomes	30
2.2.3. Peptide bond synthesis and translocation	31
2.2.4. Regulation of the rate of elongation	33
2.3. Polypeptide chain termination	34
2.4. Topography of protein synthesis	35
3. Regulation of protein synthesis	38
3.1. Quantitative regulation of protein synthesis	38
3.1.1. Number and activity of ribosomes	38
3.1.2. Regulation of translation at the level of initiation	40
3.1.3. Mechanisms of regulation of polypeptide chain initiation	42
3.2. Qualitative regulation of protein synthesis	46
3.2.1. Variations in concentrations of mRNA species	46
3.2.2. Efficiencies of translation of different mRNA species	48
4. Future trends	52
5. Acknowledgements	53
References	57

Chapter 2. Protein Turnover in the Whole Animal and Specific Tissues

by P.J. GARLICK

1. Introduction	77
2. Methods for measuring the rate of turnover of tissue protein	79
2.1. Protein synthesis	80
2.1.1. Label administered as a tracer dose	80
2.1.2. Injection of a large (non-tracer) dose of labelled amino acid	86
2.2. Protein breakdown	88
2.2.1. Decay of labelled proteins	88
2.2.2. Indirect determination of degradation rates	92
2.3. Conclusions	93
3. Methods for measuring the rate of protein turnover in the whole body	95
3.1. Radioactively labelled amino acids	97
3.2. Stable isotopes	99
3.3. Summary	104
4. Measurements of protein turnover in normal animals	104
4.1. Contribution of tissues to whole body turnover	104
4.2. Some characteristics of turnover in individual tissues	106
4.2.1. Liver	106
4.2.2. Intestinal mucosa	107
4.2.3. Muscle	108

importance."

29	4.3. Interspecies variations	111
29	4.4. Turnover in immature animals	114
30	5. Regulation of protein mass in relation to changes in synthesis and	
31	breakdown	116
33	5.1. Liver regeneration	116
34	5.2. The influence of nutrition on protein turnover in the liver . . .	118
35	5.2.1. Effects of starvation and dietary protein on synthesis	
38	and breakdown of cellular proteins	118
38	5.2.2. Effects of starvation and dietary protein on the relative	
38	synthesis of tissue and secreted proteins	121
40	5.2.3. Recovery from protein depletion	123
42	5.2.4. Summary of nutritional effects on liver protein turn-	
46	over	123
46	5.3. Hypertrophy of the rat hemidiaphragm after unilateral nerve	
48	section	125
52	5.4. Effects of nutrition on protein turnover in muscle	127
53	5.4.1. Protein synthesis	127
57	5.4.2. Protein breakdown	129
	5.4.3. Summary of nutritional effects on muscle protein turn-	
	over	134
	6. Protein turnover in man	135
	6.1. Normal man	135
	6.2. Effects of nutrition	136
	6.3. Effects of injury and infection	142
	7. Concluding remarks	143
	8. Acknowledgements	144
77	References	145

Chapter 3. Protein Degradation in Muscle and Liver by D.J. MILLWARD

86	1. Introduction	153
88	2. Protein degradation in muscle	154
88	2.1. Characteristics of degradation of muscle proteins	155
92	2.1.1. The rate of protein degradation in individual muscles	155
93	2.1.2. Changes in the rate of degradation in muscle	155
95	2.1.3. Turnover characteristics of contractile proteins	159
97	2.1.4. Turnover characteristics of soluble proteins	161
99	2.2. Characteristics of potential components of a muscle degrada-	
04	tion system	162
04	2.2.1. Muscle lysosomes and lysosomal proteinases	162
06	2.2.2. Calcium-activated neutral proteinase	165
06	2.2.3. Muscle alkaline proteinase	167
07	2.2.4. Group-specific or serine proteinase	168
08	2.2.5. Smooth-muscle trypsin-like neutral proteinase	171
