## VOLUME 30

### A HISTORY OF BIOCHEMISTRY

|                                 |      |
|---------------------------------|------|
| General Preface . . . . .       | vii  |
| Preface to Section VI . . . . . | viii |
| List of Illustrations . . . . . | xv   |

|                                      |    |
|--------------------------------------|----|
| General introduction . . . . .       | 1  |
| References . . . . .                 | 17 |
| Foreword to Parts I and II . . . . . | 19 |

#### *Part I*

#### *Proto-Biochemistry*

##### *Chapter 1. Ancient Greek Proto-Biochemistry*

|                                                             |    |
|-------------------------------------------------------------|----|
| 1. Proto-biochemistry of the presocratic thinkers . . . . . | 23 |
| 2. Hippocratic concepts of metabolism . . . . .             | 29 |
| 3. The atomists . . . . .                                   | 33 |
| 4. Plato's views on metabolism . . . . .                    | 35 |
| 5. Metabolism in Aristotle's natural philosophy . . . . .   | 41 |
| 6. Galen's humoralism and his views on metabolism . . . . . | 44 |
| 7. Retrospect . . . . .                                     | 47 |
| References . . . . .                                        | 50 |

##### *Chapter 2. From Alchemy to Iatrochemistry*

|                                                                      |    |
|----------------------------------------------------------------------|----|
| 1. Postgalenic proto-biochemistry . . . . .                          | 51 |
| 2. Convergences in alchemies . . . . .                               | 55 |
| 3. Chinese alchemy . . . . .                                         | 56 |
| 4. Greek alchemy . . . . .                                           | 57 |
| 5. Arabic alchemy . . . . .                                          | 58 |
| 6. Mediaeval European alchemy . . . . .                              | 61 |
| 7. Experimental and non-experimental components of alchemy . . . . . | 61 |
| 8. Chinese iatrochemistry . . . . .                                  | 68 |
| 9. Paracelsus . . . . .                                              | 68 |
| 10. The Paracelsians . . . . .                                       | 71 |
| 11. Van Helmont . . . . .                                            | 73 |
| 12. Iatrochemistry . . . . .                                         | 77 |
| References . . . . .                                                 | 79 |

*Chapter 3. Respiratory Theory of "Vital Heat" and  
Phlogistonic Proto-Biochemistry*

|                                                 |    |
|-------------------------------------------------|----|
| 1. Respiratory theory of "vital heat" . . . . . | 81 |
| 2. Iatromechanism . . . . .                     | 87 |
| 3. Friction theory of animal heat . . . . .     | 88 |
| 4. Phlogiston and life . . . . .                | 88 |
| 5. The concept of "heat capacity" . . . . .     | 89 |
| 6. The pneumatic chemists . . . . .             | 89 |
| 7. Photosynthesis . . . . .                     | 93 |
| 8. Phlogistonic metabolic theory . . . . .      | 94 |
| References . . . . .                            | 96 |

*Chapter 4. "Dynamic Permanence" and "Assimilation" Prior to  
the Chemical Revolution, p. 97*

|                      |     |
|----------------------|-----|
| References . . . . . | 104 |
|----------------------|-----|

*Part II*

*From Proto-Biochemistry to Biochemistry*

*Chapter 5. Metabolic Theories of Lavoisier and his Followers*

|                                                      |     |
|------------------------------------------------------|-----|
| 1. Lavoisier on combustion and respiration . . . . . | 107 |
| 2. The chemical revolution . . . . .                 | 111 |
| 3. Proximate principles . . . . .                    | 112 |
| 4. The concept of animalization . . . . .            | 117 |
| 5. Prout's nutritional theories . . . . .            | 119 |
| 6. Mulder's theory . . . . .                         | 123 |
| References . . . . .                                 | 126 |

*Chapter 6. The Nature of Alcoholic Fermentation,  
the "Theory of the Cells" and the Concept of the  
Cells as Units of Metabolism*

|                                                                      |     |
|----------------------------------------------------------------------|-----|
| 1. Alcoholic fermentation . . . . .                                  | 129 |
| 2. The cell theory . . . . .                                         | 135 |
| 3. The "theory of the cells" . . . . .                               | 137 |
| 4. Origin of Schwann's concept of intracellular metabolism . . . . . | 138 |
| 5. Yeast denied as an agent of alcoholic fermentation . . . . .      | 139 |
| 6. Liebig's theory of fermentation . . . . .                         | 141 |
| References . . . . .                                                 | 144 |

*Chapter 7. The Rise and Fall of Liebig's Metabolic Theories*

|                                          |     |
|------------------------------------------|-----|
| 1. Agricultural chemistry . . . . .      | 145 |
| 2. Animal chemistry . . . . .            | 149 |
| 3. Liebig's followers . . . . .          | 158 |
| 4. Rupture with Liebig's views . . . . . | 161 |
| References . . . . .                     | 162 |

*Chapter 8. The Intracellular Location of Metabolic Changes*

|                                                                                  |     |
|----------------------------------------------------------------------------------|-----|
| 1. Lagrange and the theory of the location of respiration in the blood . . . . . | 163 |
| 2. Intracellular respiration . . . . .                                           | 169 |
| References . . . . .                                                             | 171 |

*Chapter 9. The Reaction Against "Analysm":  
Antichemicalists and Physiological Chemists of the 19th Century*

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| 1. Antichemicalism . . . . .                                       | 173 |
| 2. Opposition from the vitalist camp . . . . .                     | 175 |
| 3. Opposition from the chemists . . . . .                          | 179 |
| 4. Opposition from the physiologists . . . . .                     | 179 |
| 5. The era of physiological chemistry (ca. 1840–ca. 1880). . . . . | 183 |
| 6. Journals devoted to physiological chemistry . . . . .           | 187 |
| 7. From physiological chemistry to biochemistry . . . . .          | 187 |
| References . . . . .                                               | 189 |

*Chapter 10. Dynamic Permanence after Liebig, and  
the End of the Myth of Direct Assimilation*

|                                                                  |     |
|------------------------------------------------------------------|-----|
| 1. Composition and decomposition at the cellular level . . . . . | 191 |
| 2. Theories of protein metabolism . . . . .                      | 193 |
| 3. The glycogenic function of the liver . . . . .                | 196 |
| 4. Indirect nutrition . . . . .                                  | 200 |
| 5. The concept of the internal environment . . . . .             | 202 |
| 6. Bernard's views on metabolism . . . . .                       | 206 |
| 7. Regulation of the internal environment . . . . .              | 207 |
| 8. Bernard's idea of experimental medicine . . . . .             | 208 |
| 9. Dynamic state of body constituents . . . . .                  | 209 |
| References . . . . .                                             | 212 |

*Chapter 11. From Forces-of-Life to Bioenergetics*

|                                                 |     |
|-------------------------------------------------|-----|
| 1. Vital principles and vital force . . . . .   | 215 |
| 2. The opposition towards vital force . . . . . | 220 |
