CONTENTS

VOLUME 31

A HISTORY OF BIOCHEMISTRY

Part III. History of the Identification of the Sources of Free Energy in Organisms

General Preface	vii
Preface to Section VI	viii
List of Plates	xviii
Errata (Volume 30)	xx

Introduction

1. The emergence of biochemistry	1
2. Vertical (recurrent) history and horizontal (planary) history of sciences	9
3. Methodological aspects	11
(a) Application of tracer elements	13
(b) Inborn errors of metabolism	14
(c) Microbial mutants	15
4. Institutional aspects	17
5. Sources of free energy	18
6. Acknowledgements	19
References	19

Section I

Anaerobic Phosphorylation

Chapter 17. The Discovery of "Cell-free Fermentation"

1. Glycolysis	23
2. Enzymatic theories of fermentation prior to the discovery of cell-free fermentation	23
3. Discovery of "cell-free fermentation"	27
4. The reception of the discovery of cell-free fermentation	29
5. Enzymes <i>versus</i> protoplasm	32
References	37

Chapter 18. Discovery of the "Coenzyme of Alcoholic Fermentation" and of the Esterification of Phosphate

1. Recognition of the by-product nature of certain substances found in fermenting mixtures	39
2. Discovery of the "coenzyme of alcoholic fermentation"	43

3. Discovery of the esterification of phosphate	48
4. Hexosephosphates	49
5. Interpretation of the Harden and Young reaction	50
References	56

*Chapter 19. The Search, Before 1930, for Metabolic Intermediates
Between Glucose and Ethanol, in Alcoholic Fermentation*

1. Chemical schemes of alcoholic fermentation derived from non-biochemical experiments	59
2. Lactic acid	61
3. Formic acid	65
4. Glycogen	66
5. Formaldehyde	66
6. Glyceraldehyde and dihydroxyacetone	66
7. Pyruvic acid and acetaldehyde	68
8. Methylglyoxal	73
References	77

Chapter 20. Muscle Glycolysis Before 1926

1. Lactic acid formation from glycogen	81
2. Lactacidogen	83
3. Fate of the lactic acid	87
References	90

*Chapter 21. The Unified Pathway of Glycolysis, and the
Process of Phosphate Esterification*

1. The unified pathway of glycolysis	91
2. Reactions leading to the esterification of inorganic phosphate	93
3. The concept of "stabilization stages"	94
4. Meyerhof's work on glycolysing extracts of muscles (1926-1927)	96
5. The phosphorolysis of glycogen	98
6. From G-6-P to F-6-P	101
7. From F-6-P to FDP (phosphofruktokinase).	101
References	103

*Chapter 22. The Scission of Hexosediphosphate into
Triosephosphates*

1. Kluyver and Struyk's theory	105

A Histo

2. Phosphoglyceric acid	105
3. First scheme of the oxido-reduction events following the scission of FDP	106
4. Embden's and Meyerhof's unified theory of glycolysis	111
5. Identification of the triosephosphates resulting from the scission of FDP	133
6. The liquidation of the methylglyoxal theory and of the Harden equation	114
References	115

*Chapter 23. The Unravelling of the Nature of Harden and Young's
"Coenzyme" and the Discovery of "Energy-rich Phosphate Bonds"*

1. Discovery of the adenosine phosphates of muscle	117
2. Discovery of the guanidine phosphates	123
3. Discovery of the "energy-rich bonds".	124
4. Discovery of enzymatic transphosphorylation	127
5. Mg^{2+} as a constituent of coenzyme	129
6. Nature of the adenylic compounds present in the "coenzyme"	129
7. Reasons for the delayed elucidation of the nature of Harden's coenzyme	131
References	132

Chapter 24. The Complete Glycolysis Pathway

1. Phosphate esterification connected with the second (oxidative) phase of glycolysis	135
2. Warburg's "Gärtest"	136
3. Phosphate transfer from phosphopyruvate to ADP (second phosphorylation step of the oxido-reduction phase of the pathway)	137
4. The oxidation of triosephosphate	139
5. From 3-phosphoglycerate to phosphoenolpyruvate (2nd step of the oxido-reduction phase of glycolysis pathway)	139
6. Phosphate transfer from 1,3-diphosphoglycerate to ATP (first phosphorylation step).	143
7. Conversion of 3-phosphoglycerate into pyruvate	145
8. The epilogues of glycolysis: formation of alcohol or of lactic acid	146
9. The complete pathway. Epistemological aspects of its unravelling	148
References	155

Chapter 25. Glycolysis as a Source of Free Energy

1. From calorimetry to free-energy studies	159
2. Coupled chemical reactions	166
3. The discovery of the alactacid muscle contraction	168
4. Phosphate bond energy and its generation in glycolysis	173
References	182
