CONTENTS

VOLUME 33A

A HISTORY OF BIOCHEMISTRY

Part V. The Unravelling of Biosynthetic Pathways

General Preface	i
Preface to section VI	viii
List of Plates	xvii
Errata (Volume 32)	xx

<i>Introduction</i>	1
---------------------------	---

Chapter 53. The energetics of biosynthesis

1. Introduction	29
2. ATP and biosynthesis	31
3. Discovery by Nachmansohn of the utilization of the energy of ATP in the biosynthesis of acetylcholine	33
4. Sulfanilamide acetylation	35
5. Coenzyme A	37
6. Mechanism of acetate activation	38
References	43

Chapter 54. Peptide bonds

(A) Replacement reactions in proteins and transpeptidations	45
1. The theory of incorporation by substitution	45

2. Replacement reactions in protein synthesis (peptide transfers)	49
3. Template hypothesis and peptide hypothesis	51
(B) Peptide bond synthesis	54
4. Demise of peptide bond formation by reversal of Mass Action	54
5. Inhibition of peptide synthesis by inhibition of oxidation	54
6. Peptide bond synthesis in homogenates	55
7. Activated form of benzoic acid in hippuric acid synthesis	55
References	59

Chapter 55. The pentose phosphate cycle

(A) Oxidative irreversible sequence from glucose-6-phosphate to ribulose-5-phosphate	61
1. From glucose-6-phosphate to D-gluconate-6-phosphate	61
2. Enzymes of the oxidative pathway	64
(a) Glucose-6-phosphate dehydrogenase	64
(b) Lactonase	65
(c) Phosphogluconate dehydrogenase	65
(B) Non-oxidative, reversible transfer from pentose phosphate to hexose phosphate	67
3. Introduction	67
4. Phosphoribose isomerase and phosphoribose epimerase	67
5. Transketolase	69
6. Mechanism of transketolase action	70
7. Transaldolase	71
(C) Pentose phosphate cycle	72
References	78

Chapter 56. The photosynthetic cycle of carbon reduction

1. First experiments with ^{11}C . Demise of the formaldehyde theory. Discovery of CO_2 fixation in the dark	81
2. Identification of an ATP-dependent carboxylative phase	85
(a) Discovery of ^{14}C and recognition of phosphoglyceric acid as an early intermediate	85
(b) Introduction of paper chromatography	91
(c) Ribulose and sedoheptulose as intermediates	92
(d) Phosphoglyceric acid formation with cell-free enzyme preparations	94
(e) Enzymatic formation of phosphoglyceric acid from ribulose diphosphate and carbon dioxide	96

49	3. Identification of an ATP and NADPH-dependent reductive phase . .	97
51	(a) Kinetic studies	97
54	(b) Enzymes of the reductive phase	100
54	4. Regenerative phase	101
54	5. Synthesis of hexose phosphate from CO ₂ in the dark in a model	
55	multi-enzyme system	102
55	6. The reductive carbohydrate cycle	103
59	References	106

Chapter 57. CO₂ fixation in heterotrophs. Gluconeogenesis

61	1. Introduction	109
61	2. Fixation of CO ₂ in heterotrophic bacteria	111
64	3. Carbon dioxide fixation in pigeon liver preparations	117
64	4. Evans and Slotin's experiments demonstrating the participation of	
65	CO ₂ in the biosynthesis of α -oxoglutarate	121
65	5. Ruben and Kamen's experiments	122
65	6. Direct demonstration of CO ₂ fixation in mammalian tissues	124
67	7. Phosphoenolpyruvate carboxykinase	129
67	8. Pyruvate carboxylase	131
67	9. Fructose diphosphatase	134
69	10. From glucose-6-phosphate to glucose	135
70	11. Recapitulation of intermediate stages of gluconeogenesis	135
71	References	138

Chapter 58. Biosynthesis of complex saccharides from monosaccharides

81	1. Introduction	141
85	2. The concept of transglycosylation	141
85	3. The phosphorylase theory of glycogen and starch biosynthesis	
91	(1939-1957)	144
92	4. The unravelling of glucan structures	148
94	5. Phosphorylase theory of sucrose biosynthesis	150
96	6. Reactions catalysed by glucosyltransferase	150
	7. Introduction of the concept of a branching enzyme	151
	8. Sugar nucleotides and their function in the interconversions of	
	sugars	153
	9. The role of sugar nucleotides in transglycosylation	156
	(a) The formation of glycosidic bonds by transglycosylation	156
	(b) UDPG as glucose donor in the synthesis of trehalose phosphate	157
