A HISTORY OF BIOCHEMISTRY

Part V. The Unravelling of Biosynthetic Pathways
 (Continued: The biosynthetic pathways of amino acids
 and their extensions)

General Preface	vii
Preface to section VI	viii
List of Plates	xviii

Introduction

1. The biosynthesis of amino acids	1
2. The concept of metabolic pathway	2
3. Biosynthetic pathways as aspects of the enzyme theory	4
4. Biosynthesis not a reversal of degradation according to the law of mass action	4
5. A unifying fabric	6
References	9

*Chapter 64. Amino acids resulting of transamination to products
 of glycolysis or of the tricarboxylic acid cycle (L-alanine,
 glutamic acid, aspartic acid) and amides derived of these
 amino acids (glutamine, asparagine)*

1. L-Alanine	11
--------------------	----

2. Biosynthesis of glutamine	12
3. Biosynthesis of asparagine	13
References	14

Chapter 65. The biosynthetic pathway of the amino acids of the glutamate family (glutamic acid, ornithine, arginine, proline) and its extensions (urea, pyrrolidine ring of nicotine, hyoscyne and hyoscyamine, pyrrolizidine alkaloids, guanidine compounds, pyrimidines)

1. Structural interrelations	15
2. Experiments on animals	17
3. Hydroxyproline	17
4. Ornithine	21
5. Possible intermediates in the pathways of the interconversions of glutamic acid, hydroxyproline and ornithine	21
(a) 2-Pyrrolidine-5-carboxylic acid (pyroglutamic acid, 5-oxoproline)	
(b) α -Amino- δ -hydroxyvaleric acid	22
(c) α -Keto- δ -aminovaleric acid vs. glutamic γ -semialdehyde	23
(d) α -Keto- δ -aminovaleric acid	23
6. Which is the amino group lost by ornithine in its conversion to proline and to glutamic acid in vivo?	24
7. Intramolecular shift postulated by Shemin and Rittenberg in the pathway from ornithine to proline	25
8. Glutamate-proline-ornithine interrelation in <i>Escherichia coli</i> , <i>Neurospora crassa</i> and <i>Torulopsis utilis</i>	27
9. From glutamic acid to proline: studies with exacting mutants	27
10. Enzymes of proline biosynthesis from glutamate	31
11. Enzymes of the path from ornithine to proline	32
12. Recognition, by Srb and Horowitz, of the occurrence of the "ornithine cycle" in <i>Neurospora</i>	32
13. Arginine biosynthesis in kidney slices	33
14. Arginine in tissue homogenates by the citrulline-arginine step of the ornithine cycle	33
15. Conversion of ornithine to citrulline (Step 1)	35
16. Recognition of carbamoylphosphate as intermediate in ureogenesis	40
17. Enzymes of the biosynthesis of citrulline from ornithine	40
(a) Carbamoylphosphate synthase	41
(b) Ornithine carbamoyltransferase	41
(c) Carbamate kinase	43
18. Metabolic pathway from citrulline to arginine (Step 2 of the primitive ornithine cycle)	43

scientific endeavour, this book is a worthy companion to others in a monumental series.

12	28. Nature of the intermediate, argininosuccinic acid	47
13	29. Enzymes of the pathway from citrulline to arginine	48
14	30. The present concept of the expanded ornithine cycle	49
	31. "Ureogenesis" recognized as an extension on the pathway of arginine biosynthesis	51
	32. Enzymes of the acetylated pathway from glutamate to ornithine . .	52
	(a) Synthesis of <i>N</i> -acetylglutamate	53
	(b) Formation of <i>N</i> -acetyl-L-glutamate-5-phosphate	53
	(c) Reductive dephosphorylation of <i>N</i> -acetyl-L-glutamate-5-phosphate to <i>N</i> -acetylglutamate- γ -semialdehyde	54
	(d) Transamination of <i>N</i> -acetylglutamate- γ -semialdehyde with a formation of N^{α} -acetylornithine	55
	(e) From N^{α} -acetylornithine to ornithine	55
5	33. Synthesis of <i>N</i> -acetyl glutamate by liver mitochondria	56
7	Extensions on the biosynthetic pathways of the amino acids of the glutamate family	56
7	34. Biosynthesis of the pyrrolidine ring of nicotine	56
21	35. Guanidine compounds	59
	Introduction	59
	(a) Degradation of the carbon chain of arginine	59
	(b) Transamidation from arginine	63
	(c) Condensation of the amino group of arginine with pyruvic acid	65
22	36. Pyrimidines	66
23	(a) Chemical configuration of pyrimidines	66
23	(b) Burian's theory	69
24	(c) Experiments with ^{15}N	69
	(d) Experiments with isotopic carbon	70
25	(e) Search for an alloxanic intermediate	70
27	(f) Orotidine-5-phosphate as intermediate	71
27	(g) From carbamoylphosphate to orotic acid	73
31	References	76

Chapter 66. Biosynthesis of methionine, cysteine and cystine

33	1. Suggestion of a conversion of methionine (or homocysteine) to cysteine	83
35	2. Nature of the conversion of methionine (or homocystine) into cystine	87
0	3. Relation of cystathionine with homocysteine and serine and with cysteine	88
0	4. Data confirming that cystathionine is an intermediate in cystine biosynthesis	90
1	5. From homocysteine to methionine (transmethylation)	90
