CONTENTS

CHAPTER	PAGE
PREFACE	vii
I. INTRODUCTION	1
II. ENZYME TECHNIQUES	8
III. ENZYME ISOLATION	27
IV. ENZYME KINETICS	54
V. ENZYME CLASSIFICATION	167
VI. ENZYME SPECIFICITY	199
VII. ENZYME MECHANISMS	259
VIII. ENZYME INHIBITORS	315
IX. ENZYME COFACTORS	360
X. ENZYME STRUCTURE	452
XI. ENZYME FORMATION	477
XII. ENZYME SYSTEMS	537
XIII. ENZYME BIOLOGY	617
TABLE OF ENZYMES	671
LIST OF SYMBOLS	786
'ATLAS' OF CRYSTALLINE ENZYMES	793
REFERENCES	809
INDEX	889

DETAILED LIST OF CONTENTS

CHAPTER	PAGE
PREFACE	vii
I. INTRODUCTION	1
II. ENZYME TECHNIQUES	8
Measurement of velocity	8
Classes of methods	10
Some practical points	11
The general handling of enzymes	12
The study of an enzyme	13
The specific and molecular activities	15
Enzyme affinities	18
Methods of quantitatively following enzyme reactions	19
(a) Spectrophotometric methods	19
(b) Manometric methods	22
(c) The Thunberg method	22
(d) Electrode methods	23
(e) Polarimetric methods	24
(f) Chromatographic methods	25
(g) Chemical estimations	25
III. ENZYME ISOLATION	27
Importance of enzyme purification	27
Methods of purification	28
(a) Test	28
(b) General procedure	29
(c) Source of enzyme	33
(d) Extraction	33
Fractionation methods	35
(a) Fractional precipitation by change of pH	36
(b) Fractional denaturation by heating	36
(c) Fractional precipitation with organic solvents	37
(d) Fractional precipitation by salts	39
(e) Fractional adsorption	41
(f) Column chromatography	43
(g) Crystallization	44
(h) Sequence of fractionation methods	46

(i) Other methods	48
Other precipitants	48
Denaturation with chloroform	48
Electrophoresis	48
Concentration	49
Criteria of purity of enzymes	50
Pitfalls in working with pure enzymes	53
 IV. ENZYME KINETICS	 54
The importance of enzyme kinetics	54
Factors influencing enzyme reaction velocity	54
(A) Effect of enzyme concentration	56
(B) Effect of substrate concentration	63
Michaelis theory	63
Determination of V and K_m	67
Reactions involving two substrates	70
Inhibition by high substrate concentrations	75
Substrate acting also as activator	81
Enzymes catalysing two reactions simultaneously	84
Two enzymes acting on one substrate	87
Insoluble substrates	91
Steady-state theory	92
General methods for writing steady-state equations	94
Systems with several successive steps	98
Reactions involving two substrates	100
Measurement of the velocity constants	102
Kinetic elucidation of reaction sequence	112
Equilibrium constant of the overall reaction in terms of V and K_m	113
Integrated Michaelis equations	114
(c) Effect of pH	116
The Michaelis pH functions	118
Effect of pH on V	128
Effect of pH on K_m	135
✗ (D) Effect of temperature	145
Heat inactivation of enzymes	145
✗ Effect on the enzyme reaction itself	150
Effect on the state of ionization of the enzyme	165
 V. ENZYME CLASSIFICATION	 167
Enzyme Commission's numbering system	168
Rules for systematic and trivial nomenclatures	174
(i) General rules	174
(ii) Rules for particular classes of enzymes	178

DETAILED LIST OF CONTENTS

xiii

CHAPTER

	PAGE
Enzyme reactions	183
1. Oxidoreductases	183
Dehydrogenases and oxidases	184
Peroxidases	185
Hydroxylases and oxygenases	185
2. Transferases	186
Methyltransferases	186
Other one-carbon transferases	186
Transaldolase and transketolase	186
Acyltransferases	186
Glycosyltransferases	187
Alkyltransferases	189
Enzymes transferring nitrogenous groups	189
Enzymes transferring phosphate groups	189
Sulphur- and sulpo-transferases	192
Coenzyme A transferases	192
3. Hydrolases	192
Esterases	192
Thiolesterases	192
Phosphatases	192
Glycosidases	193
Peptidases, etc.	193
Pyrophosphatases, etc.	195
4. Lyases	195
Decarboxylases	195
Aldehyde-lyases	196
Ketoacid-lyases	196
Hydro-lyases	196
Other lyases	196
5. Isomerases	197
Racemases and epimerases	197
<i>Cis-trans</i> isomerases	197
Intramolecular oxidoreductases	197
Intramolecular transferases	197
6. Ligases	197

VI. ENZYME SPECIFICITY	199
The investigation of enzyme specificity	201
General observations on specificity	203
Stereospecificity of enzymes	204
Illustrative examples of enzyme specificity	209
Dehydrogenases	209
Glucose oxidase	210
Methyltransferases	211
