

PRINCIPLES OF BIOCHEMISTRY

SECOND EDITION

HORTON MORAN OCHS RAWN SCRIMGEOUR

Contents

Part One Introduction

Chapter 1	
Introduction to Biochemistry	3
1-1 Biochemistry Is a 20th Century Science	3
1-2 The Chemical Elements of Life	5
1-3 The Special Terminology of Biochemistry	7
1-4 Many Important Biomolecules Are Polymers	7
A. Proteins	8
B. Polysaccharides	8
C. Nucleic Acids	10
D. Membranes	12
1-5 The Energetics of Life	13
1-6 The Cell Is the Basic Unit of Life	14
1-7 Prokaryotic Cells	15
1-8 Eukaryotic Cells	16
A. The Nucleus	16
B. The Endoplasmic Reticulum and Golgi Apparatus	18
C. Mitochondria and Chloroplasts	19
D. Other Organelles	22
E. The Cytoskeleton	22
1-9 A Picture of the Living Cell	24
1-10 Biochemistry Is Multidisciplinary	26
Selected Readings	27

Chapter 2

Water

29

2·1	The Water Molecule Is Polar	30
2·2	Hydrogen Bonding in Water	30
2·3	Ionic and Polar Substances Dissolve in Water	32
2·4	Nonpolar Substances Are Insoluble in Water	34
2·5	Noncovalent Interactions in Biomolecules	35
	A. Charge-Charge Interactions	36
	B. Hydrogen Bonds	36
	C. Van der Waals Forces	37
	D. Hydrophobic Interactions	37
2·6	Water Is Nucleophilic	38
2·7	Ionization of Water	39
2·8	The pH Scale	40
2·9	Acid Dissociation Constants of Weak Acids	41
2·10	Buffered Solutions Resist Changes in pH	43
	<i>Sample Calculation 2·1</i> Buffer preparation	45
	Summary	46
	Problems	46
	Selected Readings	48

Part Two

Structure and Function of Biomolecules

Chapter 3

Amino Acids and the Primary Structures of Proteins

53

3·1	General Structure of Amino Acids	54
3·2	Structures of the 20 Common Amino Acids	56
	A. Aliphatic R Groups	58
	B. Aromatic R Groups	58
	C. Sulfur-Containing R Groups	59
	D. Side Chains with Alcohol Groups	59
	E. Basic R Groups	60
	F. Acidic R Groups and Their Amide Derivatives	60
	G. The Hydrophobicity of Amino Acid Side Chains	60
3·3	Derivatives of Common Amino Acids	60
3·4	Ionization of Amino Acids	61
3·5	Peptide Bonds Link Amino Acids in Proteins	65
3·6	Protein Purification Techniques	66
3·7	Amino Acid Composition of Proteins	69
3·8	Determining the Sequence of Amino Acid Residues	71
3·9	Protein Sequencing Strategies	74
	Summary	76
	Problems	76
	Selected Readings	78

Chapter 4**Proteins: Three-Dimensional Structure and Function****79**

4-1	There Are Four Levels of Protein Structure	80
4-2	Methods for Determining Protein Structure	81
4-3	The Conformation of the Peptide Group	82
4-4	The α Helix	86
4-5	β Structure	90
4-6	Other Conformations Are Found in Globular Proteins	92
	A. Nonrepetitive Regions	92
	B. Motifs	94
4-7	Tertiary Structure of Globular Proteins	94
4-8	Quaternary Structure	96
4-9	Protein Folding and Stability	98
	A. The Hydrophobic Effect	98
	B. Hydrogen Bonding	99
	C. Van der Waals Interactions and Charge-Charge Interactions	99
	D. Disulfide Bonds	100
	E. Protein Folding Is Assisted by Chaperones	100
4-10	Protein Denaturation and Renaturation	101
4-11	Collagen, a Fibrous Protein	103
4-12	Myoglobin, a Globular Protein	105
4-13	Hemoglobin, a Globular Protein Possessing Quaternary Structure	107
4-14	Globular Protein Function: Oxygen Binding to Myoglobin and Hemoglobin	108
	A. Oxygen Binds Reversibly to Heme	108
	B. Oxygen-Binding Curves of Myoglobin and Hemoglobin	109
	C. Hemoglobin Is an Allosteric Protein	110
4-15	Antibodies Bind Specific Antigens	112
	Summary	115
	Problems	116
	Selected Readings	117

Chapter 5**Properties of Enzymes****119**

5-1	The Six Classes of Enzymes	120
5-2	Kinetic Experiments Reveal Enzyme Properties	122
	A. Chemical Kinetics	122
	B. Enzyme Kinetics	123
5-3	The Michaelis-Menten Equation	124
	A. Derivation of the Michaelis-Menten Equation	125
	B. The Meanings of K_m	127
5-4	Kinetic Constants Indicate Enzyme Efficiency and Specificity	127
5-5	Measurement of K_m and V_{max}	129
5-6	Kinetics of Multisubstrate Reactions	130
